

Ammoniated Zinc Chloride (20%)

Product Specifications:

Ammoniated Zinc Chloride (20%) is a liquid zinc source which is specially formulated to contain both macro and micro-nutrients. Zinc is used in cellular plant growth above and below the soil. This product is recommended for agricultural crops requiring high levels of zinc (for example, corn, beans, and cotton).

Product Features

- High Purity Zinc
- Corrects and/or prevents Zinc deficiency in crops
- Foliar, Soil, Irrigation Water Applications

Derived From:

- Zinc/Zinc Oxide
- Zinc Chloride
- Anhydrous Ammonia
- Ammonium Chloride

Caution:

Ammoniated Zinc Chloride (20%) is not compatible with orthophosphate liquid fertilizers but is compatible with polyphosphate. Always perform a small scale compatibility test (jar test) prior to use.

Guaranteed Analysis:

Total Nitrogen (N).....	17.1%
Ammoniacal Nitrogen.....	17.1%
Zinc (Zn).....	20.0%
pH.....	9.5-10.5

Physical Properties:

Weight per gallon.....	11.1 lbs
Elemental Nitrogen (N) per gallon.....	1.89 lbs
Elemental Zinc (Zn) per gallon.....	2.22 lbs
Gallons per ton.....	180 gal

Usage Instructions: Products should be used based on soil and/or tissue analysis and is used for correction of zinc deficiencies. For optimal application rates, consult an agronomist. For regional crop specific applications, consult your state’s recommendations. Ideal application rates vary depending on soil pH, organic matter, and crop type.
